

Memorandum of Understanding on the
Conservation and Management of Marine Turtles and
their Habitats of the Indian Ocean and South-East Asia

Distr. GENERAL
MT-IOSEA/SS.5/Doc. 6.1
Agenda item 8b
14 August 2008

FIFTH MEETING OF THE SIGNATORY STATES
Bali, Indonesia, 20-23 August 2008

SITE-BASED INFORMATION ON SPECIES, HABITATS, THREATS,
AND MITIGATION MEASURES

1. The national report template allows Signatory States to list the nesting beaches, feeding grounds and developmental habitat important for marine turtles in their country (Annex 1). Space is provided to describe the species occurring at each site and to identify the nature and intensity of 15 threats potentially impacting those sites. Enhancements made to the Online Reporting Facility in 2006-07 extended its versatility – allowing users to add a brief site description, to include basic information on research activities occurring at each location, to clarify the relative importance of a site for a given species, and to include additional data on numbers of turtles nesting. At the same time, the tools for querying the available data were upgraded substantially.

2. The site-based information contained in the IOSEA Online Reporting Facility (<http://www.ioseaturtles.org/report.php>) is intended to complement the existing IOSEA Interactive Mapping System (IMapS), which contains nesting and migration data from other published sources. The added value of the Online Reporting Facility lies in its capacity to perform rather powerful searches not only of species and habitat occurrence, but also of threats, mitigation measures and research activities. Its potential will be demonstrated with a few illustrations of the kinds of queries that can be generated from each of the online search modules, shown in Annexes 2a-c¹.

Site identification

3. Signatory States have now identified over 700 discrete sites, a fifty percent increase over the number in the system in 2006 (Annex 3). In the online system, clicking on any of the entries opens an informative Site Data Sheet for that location. Nearly all of the 27 Signatory States have contributed some site-based data of varying completeness. Many have begun to provide geographic coordinates for about 60% of the individual sites. This has made it possible for the Secretariat to experiment with overlaying the results of database queries on versatile mapping tools such as ‘Google Maps’ and ‘Google Earth’. Users can already view the fruits of this ground-breaking work on the live website; and some examples are given in the maps attached to this paper. Map 1 provides an overview of all of the sites in the database for which geographic coordinates are available (presently numbering 427).

4. It is impossible to convey the full functionality of these mapping tools without a live demonstration. Suffice to say that the Online Reporting Facility allows a user to construct a query – say, all sites rated to be of high importance for Green turtles in the Western Indian Ocean; all sites with a high threat of egg collection in Indonesia; or sites in Bangladesh with egg relocation and hatchery programmes – and to display the results on a high resolution satellite photograph. This can be zoomed to the level of an individual nesting beach, all within just a few seconds. Map 1a gives an example of such a map, which has still not been zoomed to the full extent. Clicking on any site button opens a dialogue box (Map 1b) containing a link to the same Site Data Sheet mentioned above.

¹ In the examples that are given, the actual results (data and countries) that are presented are of less importance than the demonstration of the types of questions that can be answered using the Online Reporting Facility.

5. Google Maps, as this application is known, requires only a fairly good connection to the Internet. No additional software needs to be installed to take advantage of its functions. Google Earth goes a step further by calling up a dynamic image of the Earth that can be rotated and navigated with ease, and it allows for the IOSEA data to be superimposed on (combined with) other data sets – such as coral reef habitats, boundaries of protected areas, and even the locations of the 75 or so project sites mentioned in the IOSEA Projects Database. Google Earth requires that software be downloaded from the Internet and installed on the local computer, which is a straightforward process. Thereafter, the possibilities for creative mapping are almost limitless. The Secretariat is already exploring the practical applications of Google Earth with the UNEP/World Conservation Monitoring Centre in Cambridge, UK. The potential uses are very exciting, but are not the focus of this paper.

Species / Habitats (Annex 2a)

6. The enhancements made to the Species / Habitat module and its interface since the last Meeting of the Signatory States offer users many more ways to explore the database. By way of example, one can display:

- all sites reported to serve as nesting or foraging habitat for Loggerhead turtles *Caretta caretta* across the entire region (Map 2);
- all sites reported to be of high *national* importance for *both* nesting Hawksbill turtles *Eretmochelys imbricata* and Green turtles *Chelonia mydas* (ie. an listing of “elite” sites receiving the highest importance rating for both species) – Map 3;
- all sites in a subset of just two countries (say, Philippines and Thailand) where nesting of Hawksbill turtles is reported to be in the order of 1-100 nests per year (Map 4).

Of course, similar queries could be generated for all other species, any combination of species, and for any grouping of countries that might be of interest. The queries may be refined even further – for example to indicate where a species is only speculated to occur or where it is definitely known not to occur.

Threat identification (Annex 2b)

7. A majority of Signatories have attempted to give, for each site, a subjective rating of the intensity of up to 15 potential threats to marine turtles and their habitats. The subjective nature of the threat ratings means that caution must be exercised when interpreting the data; nevertheless, some rudimentary conclusions can be drawn.

8. The absolute number of sites reported to be affected by threats of ‘medium to high’ intensity might be considered an indicator of the relative importance of these threats across the IOSEA region. The following are the most prevalent threats to marine turtles and their habitats as reported by Signatory States (number of sites in parentheses):

Natural threats, disease, predation etc (248 sites in 16 countries)
Incidental capture in coastal fisheries (235 sites in 18 countries)
Egg collection (144 sites in 14 countries)
Habitat degradation (107)
Artificial lighting (99)
Marine debris (93)
Agricultural/urban/tourism development (89)

These findings are perhaps in accordance with what one might intuitively anticipate, though it is interesting that natural threats top the list – suggesting that control of predators might warrant even more attention from Signatory States.

9. Perhaps unexpectedly, moderate-strong exploitation of nesting females and direct harvest of animals in coastal waters are both reported with less frequency, at a similar number of sites as boat strikes (ie. 65-75 sites). The remaining threats (vehicular traffic, inshore oil pollution, industrial effluent, and sand mining/removal) are reported with much less frequency, ranging from 27 to 48 sites.

10. Though the information is still incomplete and possibly prone to subjective and geographic bias, it provides a starting point to demonstrate what might be possible with more comprehensive, reliable assessments. For example, one can already obtain a visual representation of the 68 sites where exploitation of nesting females is reported to be moderate to strong, providing some guidance as to where further management intervention may be required (Map 5). One can examine in more detail the sites in Indonesia and Philippines where egg collection is reported to be high (Map 6); or one can focus attention especially on sites in the Western Indian Ocean and Northern Indian Ocean where incidental capture in coastal fisheries is problematic (Map 7).

Mitigation measures (Annex 2c)

11. The reporting template requests information on mitigation measures that Signatory States have employed to reduce threats to marine turtles at particular sites, including such things as egg relocation, regulations on artificial lighting, vehicle restrictions, predator control etc. Some examples can be produced based on the preliminary data provided so far. For instance, egg relocation and hatcheries are reported to be used as a management tool at 96 sites in 12 countries across the IOSEA region (Map 8). Regulations on building location/design or artificial lighting are in place at only 60 sites in 11 countries (Map 9). In South-East Asia, predator control is practiced at 40 sites in four countries, notably Myanmar (Map 10). One would expect this kind of information to be of interest to users who might want to learn and share experiences about successful management techniques tried in other countries or approaches that were not so fruitful. The system allows users to query the Site Data Sheets in more detail, with a view to requesting further explanations from the information providers.

Research activities

12. The reporting template was revised to allow Signatory States to provide useful information on research activities occurring at a given site, in briefest way possible (using tick boxes). So far, only about 16 Signatory States have begun to provide some details of tagging, genetic sampling, satellite tracking and foraging surveys.

13. As example of the potential usefulness of this information, one can query the system for all sites where genetic sampling has been carried out – revealing 30 sites in 10 countries (Map 11). While this result clearly understates the actual situation due to under reporting (notably for sites in Australia), in future one should be able to obtain an informative overview of progress and gaps in genetics sampling effort.

Conclusions and priorities for enhancing the contents of the Online Reporting Facility in relation to Site-based information

The IOSEA Online Reporting Facility, already recognised as being at the leading edge of technology among multilateral environmental agreements, has been significantly enhanced since the Fourth Meeting of the Signatory States. At the same time, many Signatory States have made major efforts to improve their contributions to the system. These efforts are still not sufficient for the system to fulfil its full potential, which is to provide a solid base of reliable information on which to make macro-level recommendations affecting the conservation of marine turtles in the Indian Ocean and South-East Asia. Nevertheless, even the preliminary examples given in this paper offer a good indication of the value of this work and its contribution to assessing progress towards achievement of the 2010 Biodiversity Target set by World Summit on Sustainable Development (2002).

Actions requested from Signatory States:

1. All Signatory States should contribute information to the system, so that there is 100% participation and coverage.
2. Geographic coordinates should be provided for all sites entered in the system, so that they can be mapped.
3. Where they have not already been provided, a brief (4-5 line) description of each site should be given and details added on research activities occurring at the site (simple tick-box answers).
4. Quality control: existing data should be re-checked for accuracy and completeness, preferably in consultation with authorities who are personally familiar with the site in question. When changes are made, the date and name of the information source should be updated.
5. Consideration needs to be given to *scale*:
 - some Signatories that list very many sites should consider whether or not it might be appropriate to consolidate information from multiple sites that have very similar species, threats and mitigation measures;
 - some Signatories that provide information only at large geographic scales (eg island level) should consider whether there is value in providing information, such as nesting data, at finer (eg.beach level) resolution.

ANNEX 1: SPECIES, HABITAT AND THREAT DATA

PLEASE COMPLETE A SEPARATE SHEET FOR EACH SITE (COPY AND APPEND)

Name of site/area:				Province / State:
Geographic Coordinates	Degree	Minute	Second	Name of person / agency who has provided the information:
Select: North <input type="checkbox"/> South <input type="checkbox"/>				
West <input type="checkbox"/> East <input type="checkbox"/>				Information was last updated: (dd/mm/yyyy)
On-site research activities: <input type="checkbox"/> Tagging <input type="checkbox"/> Genetic sampling <input type="checkbox"/> Satellite tracking <input type="checkbox"/> Foraging surveys				
Short description of the site (optional) – expand text box as necessary:				

Indicate the species occurrence / use and relative importance of the site:

Species / Habitat type	CC Loggerhead	LO Olive ridley	CM Green	EI Hawksbill	DC Leatherback	ND Flatback
Nesting						
Feeding						
Developmental						

Abbreviations: Loggerhead *Caretta caretta* (CC); Olive Ridley *Lepidochelys olivacea* (LO); Green *Chelonia mydas* (CM); Hawksbill *Eretmochelys imbricata* (EI); Leatherback *Dermochelys coriacea* (DC); Flatback *Natator depressus* (ND)

Use one of the following symbols or letters to indicate the presence or absence of a species at this site in the table above, including details (if known) about the relative importance of the site for nesting, feeding or development

	Insufficient information is available on the presence or absence of the species (leave box empty)
---	The species is not present or does not use this particular habitat type at this site.
?	It is speculated (only) that the species is present at this site and may be using one or more particular habitat types. In the absence of definitive information, place a ? in the appropriate box(es).
✓	The species is definitely known to be present at this site; however no information is available on the relative importance of the site for nesting, feeding or development.
✓ H	The species is known to be present at this site and definitely uses this particular habitat. The site is considered to be of high importance for this species, relative to other sites in the country.
✓ A	The species is known to be present at this site and definitely uses this particular habitat. The site is considered to be of average importance for this species, relative to other sites in the country.
✓ L	The species is known to be present at this site and definitely uses this particular habitat. The site is considered to be of lower importance for this species, relative to other sites in the country.
a - h	Additional information on nesting habitat (where available): Indicate the estimated number of nests per year for each species by inserting, in the appropriate boxes, one of the letters 'a' through 'h', corresponding to the following scale: a: 1 - 10 nests ; b: 11 - 100 nests ; c: 101 - 500 nests ; d: 501 - 1,000 nests ; e: 1,001 - 5,000 nests ; f: 5,001 - 10,000 nests ; g: 10,001 - 100,000 nests; h: more than 100,000 nests

Describe the nature and intensity of threats to marine turtles at this site:

NATURE OF THREAT	INTENSITY OF THREAT <i>Mark with an 'X'</i>				
	Unknown	None	Low (rare event)	Medium	High (common occurrence)
Exploitation of nesting females (i.e. direct harvest on land)					
Direct harvest of animals in coastal waters at or near the site					
Egg collection (i.e. direct harvest by humans)					
Incidental capture in coastal fisheries					
Boat strikes					
Marine debris (e.g. plastics at sea, flotsam)					
Industrial effluent					
Inshore oil pollution					
Agricultural/urban/tourism development (e.g. construction that disrupts nesting activities)					
Artificial lighting (on land or near shore)					
Habitat degradation (e.g. coastal erosion, debris that obstructs nesting etc.)					
Vehicles					
Sand mining / removal					
Natural threats, disease, predation of nests/nesting females (e.g. by domestic / feral animals), or natural predation at sea					
Other (type in):					

What measures have been introduced to remove threats to marine turtles at this site?

- Monitoring / protection programmes
- Education / awareness programmes
- Egg relocation / hatcheries
- Requirements for modification of fishing gear or fishing practices (e.g seasonal or temporal closures)
- Designation / management of protected areas, sanctuaries, exclusion zones etc.
- Regulations on building location / design
- Regulations on artificial lighting
- Vehicle / access restrictions
- Removal of debris / beach clean-up
- Predator control

Other 1 (list)

Other 2 (list)

Please give further details or clarification about any of the information provided, as appropriate / necessary.
