Miscellaneous information or comments on Appendix I in general:

Pisces

Acipenseridae:

Acipenser sturio – strictly protected by law, probably extinct in the wild since 1960s, recorded last time in the Bay of Gdansk in 1967, once was commonly observed in the Polish waters, it started to decrease in the early 20th century, decline was caused due to overfishing, regulation of rivers and water pollution.

Acipenser oxyrhynchus oxyrhynchus

Reintroduction works carried out on the Baltic sturgeon.

The Polish and German (in Odra River basin) and Polish (in Vistula River basin) projects aiming at reintroduction of Baltic sturgeon are progressing. Last year more than 7000 of specimens of Baltic sturgeon (*Acipenser oxyrhynchus oxyrhynchus* Mitchill) were released into the Odra and the Vistula tributaries. After a few weeks from the release, fishermen were able to catch first sturgeon specimens in the Gulf of Gdansk. By-caught specimens have showed significant increase in weight and size. The results got so far, enables to think that there is a big chance for the success of the future reintroduction works. Fry of the Baltic sturgeon can adapt easily to the natural conditions, and it finds good

environmental conditions in the rivers and in the Gulf of Gdansk.

Poland leads also projects of reintroduction of :

Salmon (*Salmon salar*)

Trout (*Salmo trutta trutta*)

Vimba (*Vimba vimba*)

Baltic whitefish (*Coregonus lavaretus*)
