

CMS Family Capacity Building Workshop

for African National Focal Points

Implementation

**29-31 October 2013,
Cape Town, South Africa**

Not an easy position
but one of enormous
responsibility to
successfully implement
an instrument and to
conserve the
sustainable use of
migratory species.

What does implementation actually involve?

- What is the most critical part of implementation?
- What are the most relevant constraints?
- How can NFPs overcome them?

- How to integrate migratory species conservation into National Biodiversity Strategy and Action Plans (NBSAPs)?

International Implementation

- There are various species action plans / strategies for implementing conservation action.
- These were developed by/with the range states.
- Prioritised actions and actors are usually identified.
- However, in reality most are not being well implemented.

International Implementation

- Effective implementation requires cooperation and coordination between nations
... and with international organisations

Transboundary implementation

NFPs work together in groups to identify practical steps they can take to implement conservation action for shared species

- Gorillas
- West African Elephants
- West African Manatee
- Dugong
- Grey-crowned Crane
