Place names appearing in the list correspond to those used in the United Nations Terminology Bulletin No 347/Rev 1 (United Nations 1997) as amended and the ISO International Standard (International Organisation for Standardisation 1988) as amended. A number of country names have been inverted to facilitate reference as follows:

CONGO, Democratic Republic of; Iran, the Islamic Republic of; Korea, Democratic Republic of; Korea, Republic of; Macedonia, the former Yugoslav Republic of; MOLDOVA, Republic of; Tanzania, United Republic of. A number of abbreviated names have been used: UNITED KINGDOM for the UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND and United States for the United States of America.

The designations employed and the presentation of material in this list do not imply the expression of any opinion whatsoever on the part of the Secretariat concerning the legal status of any country, territory or area or of its authorities, or concerning the delimitation of frontiers and boundaries.

The names of range states that are Parties to the Convention are shown in capitalised type (e.g. ARGENTINA). If a CMS party has entered a reservation with respect to a particular species, its name is followed by an asterisk (*) (e.g. NORWAY*).

The list does not distinguish between different levels of occurrence. Some of the range states listed for *Numenius tenuirostris* for example, have been included on the basis of records of vagrancy rather than on established patterns of migration.

(Ex) after a country's name denotes that the country belongs to the species' historic range but species is thought to be

extinct in that country. (?) after a country's name denotes unconfirmed sightings

Where appropriate, dependant territories, overseas departments etc appear in parentheses after the name of the country responsible for them. The entry UNITED KINGDOM (Ascension Island) indicates that only part of Ascension Island and not the mainland UNITED KINGDOM is considered part of the range of the species. Conversely, the listing UNITED KINGDOM (including Ascension Island) indicates that the range of a species encompasses the UK mainland as well as and Ascension Island. If the Convention does not apply to a dependent territory of a Party, the entry is shown in normal type (eg DENMARK (Greenland)).

Reference to "international waters" indicates migration of a species in or above the sea or oceans beyond the limits of national jurisdiction, which falls within the substantive scope of the Convention, pursuant to Article I, paragraphs 1f) and 1h). The text in parentheses indicates the specific regions of these waters in which migration takes place.

An asterisk (*) by the name of a **species** indicates that it, or at least one population of the species, is listed on both Appendices of the Convention
